Norm-Ject[®], Henke-Ject[®] and HSW 2-Piece Syringes

2-Part All Plastic Syringes

Chromatography and sample preparation labs require high purity components for handling and preparing samples for analysis. These 2-piece syringes are manufactured from laboratory grade polypropylene and polyethylene; they are latex free, contain no rubber, silicone oil, styrene, BPA or DEHP.

They are the choice for any application requiring an inert, non-reactive syringe.

Air-Tite Brand 3-Piece Syringes

The Difference Between a 2-Part and a 3-Part Syringe

3-part syringes are extremely popular due to their low cost and smooth gliding motion. Their construction consists of a lubricated rubber gasket that sits on the tip of the plunger located inside the barrel. For some laboratory uses, the lubricant can act as a contaminant and produce problematic results.

2-part syringes do not use a rubber tip on the plunger to create a seal; instead, they have a precisely engineered and slightly oversized plunger head that creates the seal. 2-part syringes are made from a polypropylene barrel and a polyethylene plunger and do not require a lubricant to work. They're ideal for applications that cannot have the potential for foreign substances to potentially interfere with the analytical results.
